

**BRACE FOR SUPPORTING JAW ANGLE AND JAW ANGLE
CORRECTING APPARATUS INCLUDING SAME**

ABSTRACT OF THE DISCLOSURE

5

A jaw support brace includes a mounting portion extending from a middle region of a user's chest along a pair of collarbones and being supported on the collarbones, at least one elastic supporting portion extending upwardly from the mounting portion along at least one side surface of a neck, and a jaw resting portion extending below a mandible from the elastic supporting portion and supporting a jaw at a desired angle by an elastic supporting force of the elastic supporting portion.
