Patient-Specific Bin Systems, Methods And Devices

Abstract

Systems, methods, and devices are described related to the assignment and management of patient-specific bins. A dispensing device at a healthcare facility may include a number of bins for storage of medical supplies, with some of the bins designated as patient-specific bins allocated to be assigned to patients for storage of their medications or certain other supplies. A central server computer system, in communication with a computer of the dispensing device, may monitor and assign current and future patient-specific use of the bins for the dispensing device. The assignment and management of patient-specific bins may be performed by devices distributed through the system.
