

[ABSTRACT]

RELATIONSHIP EXTRACTING APPARATUS, RELATIONSHIP EXTRACTING METHOD,
AND STORAGE MEDIUM

5

A relationship extracting apparatus acquires event information that indicates features of an event of interest, determine target duration based on one or more features of the event of interest, and extract one or more action-related relationships that exist during the target duration from object relationships information. The object relationship information indicates two or more action-related
10 relationships between objects in association with time at which or during which the action-related relationship exists.
