

Topically Applicable Fungicide Agents For Treating Nails

Abstract

5

The invention relates to water-free, topically applicable agents for treating nail problems caused by mycoses, and for nail care, said agents containing at least one C1-C4 alkyl ester of lactic acid, malic acid, tartaric acid or citric acid and physiologically compatible auxiliary substances.

10

The agents according to the invention can also be used in veterinary medicine for treating fungal infections of hooves, claws and talons of pets, working animals and wild animals in captivity.
