# Mobile Black Box

Abstract: Mobile Black Box is a three-dimensional (3D) structure that combines human interaction with multimedia. Mobile Black Box is a semi-enclosed mobile cinematic theatre for film and video, virtual reality, serious gaming and media. It intends to be staged in a public space, open to all audiences, regardless of time and the physical condition of the space. One of the most unique features of Mobile Black Box is the portability of the invention. It has the ability to allow viewers to experience cinematic facilities anywhere with easy set up configuration. (Fig. 21)
