ABSTRACT

Novel derivatives of isosorbide mononitrate and its pharmaceutically acceptable salts, which have vasodilating activity with a reduced effect of tolerance, of the general formula (I)

(I)

in which A and B independently represent any of the groups $-ONO_2$ and -Z-CO-R, wherein Z is an oxygen atom or sulphur atom and R is an alkyl C_1-C_4 group, an aryl group or an aralkyl group, eventually substituted, or the group

in which R^1 is hydrogen, or an alkyl C_1-C_4 group, an aryl group or an aralkyl group, eventually substituted, with the proviso that one of A or B is always $-ONO_2$, but never both of them at the same time, when Z is an sulphur atom R is an alkyl C_1-C_4 group, an aryl group or an aralkyl group, eventually substituted, and when Z is an oxygen atom R is the group
