Abstract

Core Removal Assembly and Core Removal Machine

A core removal assembly and a core removal machine. The core removal assembly is used in the core removal machine and comprises a core removal module and a core removal mold. The core removal module comprises cutters and first positioning structures spaced apart from the cutters. The core removal mold is disposed under the core removal module. Accommodating holes are formed in the core removal mold. The core removal mold is provided with second positioning structures. The first positioning structures work in conjunction with the second positioning structures to align the cutters with the accommodating holes.
