ABSTRACT

An assembly for mounting an exhaust fan (having duct (32)) to a circular aperture formed in a wall or window (11) has inner and outer plates (14, 13) clamped to opposite sides of pane (11) using threaded fastenings (18, 33). To allow installation from inside, external plate (13) is made in two parts flexibly hinged together so that plate (13) can be folded to pass through the aperture. This arrangement still allows the use of an uninterrupted flexible seal (17) external to the window.
