(54) Title: MOBILE CONTENT MANAGEMENT

(57) **Abstract:** A computer system interacts with a mobile device to support the needs of remote users and may leverage e-ink technology so that a mobile user can access, manage and read documents without being tethered. The mobile device allows for both user-initiated downloads from a corporate entity as well as corporate pushes by the corporate entity to ensure that the user has updated content. The computer system receives a request for selected electronic content, where the request includes updated configuration information and user identification. The computer system then maps the user identification to a device type from a plurality of device types. Embodiments support different device types including electronic ink display capable devices. The selected electronic content is then downloaded to the mobile device. Subsequently, the computer system pushes updated versions of the selected electronic content based on the updated configuration information.
