

ABSTRACT

NETWORKED PEST CONTROL SYSTEM

A pest control device system (20) includes a plurality of pest control devices (40) and a data collector (32). The system (20) may further include the data collector (32) in the form of a gateway (33) that is connected to a data management server (120) via a computer network (24) along with other gateways (33) in corresponding pest control device groups (30). Each pest control device (40) includes a pest sensor (46) and a wireless communication circuit (50) to transmit information from the corresponding sensor (46). The devices (40) also configure to define a local wireless communication network (36) that can relay the information from one to the next and ultimately to the data collector (32).
