

METHOD AND DEVICE FOR EARLY DIAGNOSIS AND MANAGEMENT OF VARICOSE VEINS

【ABSTRACT】

Examples relate to a method for early diagnosis and management of varicose veins by a server, comprising acquiring varicose veins-related information from a user device, digitizing a capillary exposure based on analysis of the varicose veins-related information, evaluating a risk of varicose veins based on the digitized capillary exposure, and transmitting information of varicose veins evaluation results based on the evaluated risk of varicose veins to the user device.
