

ABSTRACT

5

A LAUNDRY APPARATUS

This invention relates to a laundry apparatus (1000) that comprises a housing (200);
and one or more panels (400) within the housing (200), each with at least one surface
provided with one or more nozzles (410) facing an article to be treated by fluid
10 discharged by the nozzles (410); wherein the panels (400) are configured to be movable
by a moving mechanism to adjust their distance from the article.
