(54) Title: SYSTEM FOR ROUTING WIRELESS COMMUNICATIONS

(57) Abstract: A method of establishing a connection to a wireless device having a partner number serviced by a partner network is provided. The method begins by establishing a translation device as a roaming location of the wireless device. When a request to route data to the partner number is received, the translation device maps the partner number to a home number of the wireless device. A connection to the wireless device is established based on a request to route data to the home number.
