(54) Title: **METHOD AND APPARATUS FOR FEEDING COMPONENT, AND METHOD AND APPARATUS FOR MOUNTING COMPONENT**

(57) Abstract

A component lack at a component arrangement position designated by a mounting program at a component feed part which feeds components to be mounted is detected, whether a spare component for the lacking component to be mounted is present in a spare component feed area (16s) of the component feed part is detected, and the supply of the component to be mounted from the designated component arrangement position in the component feed part is switched to the supply of the spare component from the spare component feed area.
