

ABSTRACT

A playlist generating method for
generating a playlist of content from received
5 broadcasted data is provided. The playlist
generating method includes the steps of: extracting
features of broadcast content beforehand, storing
the features in a content feature file, and storing
information relating to the broadcast content in a
10 content information DB; extracting features from the
received data, and storing the features in a data
feature file; searching for broadcast content of a
predetermined kind by comparing data in the content
feature file and data in the data feature file; when
15 a name of the predetermined kind of content is
determined, storing data corresponding to the
broadcast content of the predetermined kind in a
search result file; generating a playlist for the
broadcast content of the predetermined kind from the
20 search result file and the content information DB.
