

Abstract:

Incubation system

5

The invention relates to an incubation system (26) comprising a preferably multilayered carrier (1) and a container (27). The carrier (1) is received in the container (27) in such a way that the container (27) and the carrier (1) are in fluid communication via at least one interface. Furthermore, the carrier (1) is fastened to the container (27) in such a way that the

10

at least one interface for fluid exchange between the container (27) and the carrier (1) is tight.
