(54) Title: A METHOD FOR ALIGNING A CUTTER FOR CUTTING A DECORATIVE PANEL FROM A PRINTED BOARD

1000

Fig. 2

(57) Abstract: A method for aligning a cutter for cutting a decorative panel from a printed board is provided. The decorative panel has a decorative pattern printed thereon. The printed board has an image printed thereon, such that the image includes the decorative pattern and a first mark and a second mark spaced from the decorative pattern and is converted into a cutting path and uploaded to the cutter. The method includes marking a first position on the printed board, adjusting the cutting path to enable the cutter to mark the first position onto the first mark printed on the printed board, marking a second position on the printed board, rotating the cutting path about the first position to enable the cutter to mark the second position onto the second mark printed on the printed board, such that the cutter is aligned to cut the printed board when the first position and the second position coincides with the first mark and the second mark printed on the printed board.
