METHOD FOR TRANSLUCENT ONLINE INTERACTION

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method for representing users (14080, 14100-14170, 14090) within an online environment. The method allows users to define enironmental parameters for controlling user interaction, define user representation parameters of user data within the environment, capture user data from the users, build an abstract graphical display of the environment, and build a user representation within the abstract graphical display for each user's data.
