A METHOD AND A SERVER FOR ADAPTIVELY UPDATING A TARGET SUBJECT IDENTIFICATION STORED IN A DATABASE

ABSTRACT

Present disclosure provides a method and a server for adaptively updating a target subject identification to be stored in a database, the target subject identification pertaining to a target subject in a system comprising a plurality of servers, the server configured to: receive target subject information; assign a first target subject identification to the target subject information and store the first target subject identification in a first database of the server; and send a request, to the plurality of servers, to synchronize the target subject identification, the request including the target subject information relating to the target subject.
