Claims

Claim 1. A method of enhancing mental wellbeing comprising

extracting a powdered extract from a *Lignosus rhinoceros* fungus sclerotia with pore size of about 7 pore/mm,

formulating the powdered extract into a composition

delivering the composition to a person wherein the composition:

(a) increases levels of dopamine;

(b) is capable of inhibiting cyclooxygenase *in vitro* by at least 30%; and

(c) induces expression of proopiomelanocortin (POMC) gene by more than 2-fold

wherein enhancing mental wellbeing comprises making the person taking or ingesting the composition feel excited, energized, relaxed, or happy.

Claim 2. The method according to claim 1, wherein the powdered extract is dissolved in a solvent.

Claim 3. The method according to claim 1 or 2, wherein the composition is able to increase the viability of PC-12 cells *in vitro* by at least 130%.

Claim 4. The method according to any one of claims 1 to 3, comprising determining that SEQ ID NO. 1 is present in the sclerotia of *Lignosus rhinoceros* prior to extracting the powdered extract.

Claim 5. The method according to any one of claims 1 to 4, wherein enhancing mental wellbeing comprises feeling pleasure from the increased level of dopamine.

Claim 6. The method according to any one of claims 1 or 5, wherein enhancing mental wellbeing comprises feeling excited from an increased level of serum corticosterone.

Claim 7. The method according to any one of claims 1 to 6, comprising formulating the composition as a food preparation, a supplement, a beverage, or an aerosol.

Claim 8. The method according to any one of claims 1 to 7, wherein the composition is delivered orally.

Claim 9. The method according to any one of claims 1 to 7, comprising wherein the composition is delivered nasally.

Claim 10. The method according to any one of claims 1 to 6, wherein the powdered extract is dissolved in a solvent, and the composition is delivered intravenously.

Claim 11. A composition comprising a powder extracted from *Lignosus rhinoceros* fungus sclerotia with pore size of about 7 pore/mm wherein the composition is capable of: increasing levels of dopamine; inhibiting cyclooxygenase by at least 30%; Inducing expression of POMC gene by more than 2-fold and enhancing mental wellbeing, and wherein the composition is formulated as a food preparation, a supplement, a beverage or an aerosol.

Claim 12. The composition of claim 11, wherein the powdered extract from *Lignosus rhinoceros* fungus sclerotia with pore size of about 7 pore/mm comprises 1% fat, 28% -30% carbohydrate, 28% protein of which more than 10% is glycoprotein, 2% Calcium, 4% potassium, 35% magnesium.

Claim 13. A food, beverage or supplement formulation comprising a composition of claim 11 or 12 for use in enhancing mental wellbeing wherein the composition is capable of: increasing levels of dopamine; inhibiting cyclooxygenase by at least 30%; Inducing expression of POMC gene by more than 2-fold.

Claim 14. An aerosol comprising a composition of claim 11 or 12 for use in enhancing mental wellbeing wherein the composition is capable of: increasing levels of dopamine; inhibiting cyclooxygenase by at least 30%; Inducing expression of POMC gene by more than 2-fold.
