

ABSTRACT
CHAIR MASSAGER

A chair massager is provided to allow users to enjoy massage in a relaxed state of mind, just like a massage produced by two therapists (with four hands) working together in a treatment facility, e.g., a body aesthetic salon or spa. The chair massager comprises a seat's built-in massaging mechanism (10), provided in a seat portion (2), for performing massage on user's buttocks, and a backrest's built-in massaging mechanism (15), provided in a backrest portion (3), for performing massage on user's back, and also has a control section that achieves massage for users by operating the seat's built-in massaging mechanism (10) and the backrest's built-in massaging mechanism (15) in conjunction with each other.
