

ABSTRACT

An attendance management system and method, an electronic device, and a computer storage medium. The system comprises: a cloud data platform, the cloud data platform storing registration information of an object subjected to an attendance check and an attendance record of the object, and the registration information comprising identity information and attribute information; at least one attendance terminal, each of the at least one attendance terminal exchanging data with the cloud data platform by means of a predetermined interface, and each attendance terminal being used to receive, by means of the predetermined interface, the registration information of the object transmitted by the cloud data platform; and an acquired facial image of the object. The attendance record comprises at least one of the acquired facial image of the object, an attendance time, and an attendance region. The cloud data platform simultaneously provides an attendance management service for multiple users, such that the users are more quickly and economically introduced into the attendance management system.
