

Abstract

Precoding Processing Method and Apparatus for Data, and Storage Medium

The present disclosure provides a precoding processing method and apparatus for data, and a storage medium. The method includes: determining a precoding mode according to a type of a control channel, wherein the precoding mode at least includes one of: a predefined precoding mode or a feedback precoding mode; and performing precoding processing on data of the control channel according to the precoding mode. The described technical solution can be used to solve the problem in the related art concerning which encoding mode a sender uses to precode data of a control channel.
