

RESOURCE TRANSMISSION METHOD AND APPARATUS

ABSTRACT

Implementations of the present application disclose a resource transmission method and apparatus. The method includes the following: receiving a resource
5 sending request of a first user, where the resource sending request includes at least a resource to be sent, a user question matching the resource, and location information corresponding to the resource; and releasing the location information to verify a second user based on the user question when the second user obtains the resource through a search based on the released location information, and sending the resource
10 to the second user after the verification succeeds. Based on the method, the following cumbersome process can be alleviated: A resource acquirer searches for a specific target object at a specified location and collects an image. As such, resources can be conveniently obtained.
