(54) **Title:** SYSTEMS AND METHODS FOR CREATING AND IMPLEMENTING AN ARTIFICIALLY INTELLIGENT AGENT OR SYSTEM

Fig. 1

(57) **Abstract:** A system and associated methods for creating and implementing an artificially intelligent agent or system are disclosed. In at least one embodiment, a target personality is implemented in memory on an at least one computing device and configured for responding to an at least one conversational input received from an at least one communicating entity. An at least one conversational personality is configured for conversing with the target personality as needed in order to provide the target personality with appropriate knowledge and responses. For each conversational input received by the target personality, it is first processed to derive an at least one core meaning associated therewith. An appropriate raw response is determined then formatted before being transmitted to the communicating entity. Thus, the target personality is capable of carrying on a conversation, even if some responses provided by the target personality are obtained from the at least one conversational personality.
