(54) Title: METHOD AND SYSTEM FOR MONITORING CONTAINERS TO MAINTAIN THE SECURITY THEREOF

(57) Abstract: A container and contents monitoring system includes a device, a reader, a server, and a software backbone. The device communicates with the reader in order to determine the security and/or location of the container to which the device is attached. The reader transmits the information from the device to the server. The device determines if a security condition has occurred based on at least one sensor located on or in the container.
