(54) Title: WIRELESS COMMUNICATION HEADSET SYSTEM

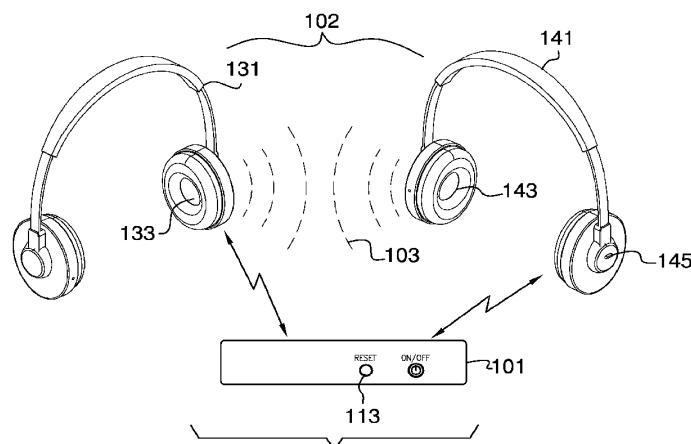

FIG. 1

(57) Abstract: The wireless communication headset system is a private communication system. The wireless communication headset system comprises a wireless routing device, a plurality of communication stations, and a plurality of wireless communication links. The wireless communication headset system supports audio and text-based communication between the plurality of communication stations. The wireless communication headset system supports a broadcast model of communication. The wireless routing device establishes a wireless communication link selected from the plurality of wireless communication link with each individual communication station contained in the plurality of communication stations. The wireless routing device is a repeater that receives a message from any first individual communication selected from the plurality of communication stations and retransmits the message to each individual headset remaining in the plurality of headsets.
