(54) Title: **A DICE, A GAMES' BOARD AND A PLAYING DICE ASSEMBLY, AND A GAMES' BOARD**

(57) Abstract

A piece, such as a dice or a playing dice, provided with an outer surface with four faces. Each face has at least in part the shape of a segment of a sphere and carries an identifying index. The centre of each face is located on the angular points of a symmetrical tetrahedron. In each case three of the four faces, which are situated mutually in pairs adjacent one other, touch one other at a trihedral point, which is situated diametrically with regard to the fourth face. On the outer surface the piece is provided with four support positions for the piece, each support position having as a centre a trihedral point. Assembly of a game board with a first number of playing surfaces and a second number of playing dice according to the invention, each playing surface containing a recess for removably or alternatively rotatably and retainably receiving a playing dice. Game's board with a number of playing surfaces, each playing surface having a recess.
