

ABSTRACT

APPLICATION NO: 2001057870-6

RAISEABLE COVER/TABLE COMPONENT FOR MODULAR FURNITURE (SYSTEMIND® PLATFORM)

Summary

A new module of the Systemind® Platform, this can serve both as a raised table-top and as a storage unit.

Description

This invention extends the Systemind® Platform configuration by providing a raiseable table as one of its module options. This is an optional boxed article of furniture having an inner space for storage purposes, and removeable cover with legs that can serve as a table top in an operative position. Alternatively, the cover/table can be inserted into the interior of the box to form a compact and substantially peripherally closed unit.

To put the cover/table in its operative position, it is first vertically raised till the legs are clear of the box. The cover/table is then rotated 90 degrees (either clockwise or anti-clockwise). It is then lowered onto the ledges at the four inner corners of the box.

See Figure 5 in the Drawings.
