(54) Title: FORWARD ERROR CORRECTION MEDIA ACCESS CONTROL SYSTEM

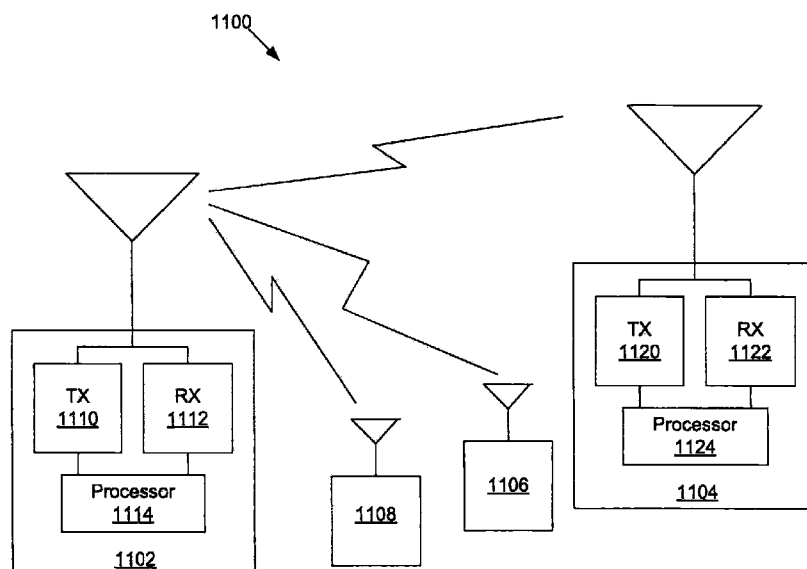

Figure 1

(57) Abstract: This disclosure relates to method, device and system for compensating for information not received in a communication system. An encoded signal is created from a source signal using a forward error correction technique. A first predetermined part of the encoded signal is transmitted. A second predetermined part of the encoded signal is transmitted. Transmission of the second predetermined part of the encoded signal is terminated after a determination of a successful decoding of the encoded signal is made.
