

TITLE OF THE INVENTION: RECYCLABLE STEERING WHEEL

ABSTRACT

The invention relates to a steering wheel (01), for example for a motor vehicle, comprising a rigid frame (10), and a combination of thermoplastic injection-moulded trim parts arranged as a half-shell, advantageously put together by clipping and/or screwing, or by any other fastening means on said frame, the injection-moulded parts constituting the trim of said frame (10) and forming the design and grip of said steering wheel (01).
