FLEXIBLY INTERFACEABLE PORTABLE COMPUTING DEVICE

ABSTRACT

A portable computer system is disclosed that comprises a display having a first thickness, the display consisting of a display element and associated display casing, the first thickness being a minimum total thickness necessary to contain only the display element in the display casing; a keyboard having a second thickness, the keyboard consisting of a keyboard element and associated keyboard casing, the second thickness being a minimum total thickness necessary to contain only the keyboard element in the keyboard casing; and a plurality of other components. The display when stacked upon the keyboard and the plurality of other components are at least one of enfoldable and locatable within a total thickness substantially equal to a sum of the first thickness and the second thickness, to present a slim profile.
