LOCATION REGISTRATION INHIBITION CONTROL APPARATUS FOR MOBILE
RADIO TELEPHONE AND ITS METHOD THEREOF

ABSTRACT

The present invention discloses a mobile radio telephone (1) which makes a request for location registration inhibition via a key pad portion (104) which is manipulated by an user of a mobile radio telephone (1). A first memory (107) stores the inhibition request therein, and a display (105) displays the inhibition request. A controller (103) does not control a request for location registration with respect to the base station (21 - 26) even though the user of the mobile radio telephone moves between registered location areas when the inhibition request is stored in the first memory (107).
