

G00002

Summary

162162

Method and switching arrangement for establishing telecommunication
5 connections in a communication network between subscriber stations and/or
separate networks connected to it.

For establishing telecommunication connections in a communication network
(KN), in particular a public switched network, between subscriber stations,
10 which are part of different subscriber groups (A1, A2; B1, B2, B3) of at least
one subscriber system, and/or from and to respectively separate networks
(third-party networks) via separate connection devices (T1, T2, T3), individual
markers provided by the subscriber stations in question and/or via separate
networks and/or dialling information, which is only taking into account its own
15 numbering plan, are used in the connection devices (T1, T2, T3).
