(54) **Title:** METHOD FOR RECOVERING TWO OR MORE GENES, OR GENE PRODUCTS, ENCODING AN IMMUNORECEPTOR

(57) **Abstract:** The present invention is related to a method for recovering two or more genes, or gene products, or cDNAs, encoding for an immunoreceptor having two or more subunits, which two or more genes, or gene products, are comprised in a given source cell. The invention is further related to a method of creating a library of expressor cells, in which library each cell is capable of expressing two or more genes, or gene products, encoding for the subunits of the immunoreceptor. The invention is further related to a method of screening a library of expressor cells as created according to the above method, for one cell that expresses an immunoreceptor that has specificity for a given target molecule.
