

ABSTRACT

A plant cultivation apparatus according to the present technology includes a cultivation space where a cultivation environment is controllable,
5 and a plurality of cultivation shelves disposed in the cultivation space. An air conditioner for supplying airflow to the cultivation shelves is provided in an upper region of the cultivation space. An induced draft fan for inducing the airflow supplied from the air conditioner to the cultivation shelves is provided at least at an end of the cultivation space. The induced draft fan is configured
10 to induce the airflow supplied from the air conditioner to the cultivation shelves.
