

AUDIO APPARATUS FOR EQUIPMENT

ABSTRACT OF THE DISCLOSURE

An audio apparatus for an equipment which relates to an improvement of the sound quality in an acoustic apparatus of the equipment can be provided. In the audio apparatus 10 for an equipment having a woofer (4) and a tweeter (5), the acoustic apparatus (10) of the equipment comprises a panel portion (3) which forms a part of a casing (2) of the equipment and has a plurality of holes (H), a sound conductor (8) which is arranged between the woofer (4) and the panel portion (3), and a buffer member (9) which is provided between the sound conductor (8) and the panel portion (3) and absorbs the vibration.
