(54) Title: PREDICTING A SEPSIS CONDITION

(I)

(57) Abstract: A method of predicting a sepsis condition in a subject, comprising: a. determining a level of a biomarker in a sample of said subject, wherein the biomarker is of structure (I): Formula (I) or a salt thereof; and b. comparing said level to a predetermined reference value of the biomarker, wherein an elevated biomarker level is indicative of the risk of the sepsis condition.
