

MICROPHONE HOLDING STRUCTURE AND ELECTRONIC DEVICE

ABSTRACT OF THE DISCLOSURE

[Abstract]

[Problem] To provide a microphone holding structure
5 by which a microphone can be incorporated easily into
a limited space in an electronic device or the like
at low cost while preventing vibrations from
propagating from a chassis to a microphone.

[Solution] A microphone holding structure includes a
10 chassis that can be separated at least into a first
chassis and a second chassis; an elastic member
formed of an elastic material and having a holding
unit for holding the microphone and an attachment
portion provided in the periphery of the holding
15 unit; and a retention member fixed to the first
chassis by the second chassis in a state in which the
second chassis is attached to the first chassis, the
retention member retaining the attachment portion at
a predetermined position on the first chassis.
