

ABSTRACT

HEADGEAR FOR A PATIENT INTERFACE

Headgear for a respiratory interface has a strap assembly with an elongate flexible strap, a rail extending longitudinally along a rail portion of the strap, and a slide member
5 having a channel that receives the rail. The slide member is attached to an attachment portion of the flexible strap and slidable along the rail to adjust the length of the strap assembly. The strap comprises woven threads of different thicknesses, or woven bundles of varying numbers of threads, to vary the width or thickness of the strap
