(54) Title: METHODS AND SYSTEMS FOR EMAIL INTEGRATED FILE DELIVERY

(57) Abstract: Methods and systems consistent with the present invention provide a file delivery system for transmitting files to recipients using email, which may be used with existing email infrastructure. Email clients may "attach" files to an email by an attachment process. The attachment process, however, associates a placeholder with the email instead of the actual file. The placeholder is replaced with a URL link to the file and the email is sent. The system moves the attachments over the network to a remote server that is capable of delivering the attachments to the email recipients. File attachments are routed to recipients independent of the associated email.
