(54) Title: METHOD FOR GENE DELIVERY TO NEURONAL CELLS

(57) Abstract: The present invention relates to the use of axonal transport to deliver a baculovirus vector to a target neuronal cell by administering the vector to a site that is remote from the target cell. Such delivery allows for tracing of neuronal pathways and further a baculovirus vector may be used to deliver therapeutic gene to a target neuronal which may otherwise be not readily accessible, for the treatment of a neuronal disorder in a subject.
