

IMPROVED AIR-CONDITIONER UNIT

ABSTRACT

- 5 An air-conditioner unit comprising a temperature regulation unit having a condenser;
a tray for collecting a condensate from the condenser; a condensate filtration unit
comprising at least one conduit connected to the tray and arranged to receive the
condensate from the tray; a dispenser arranged to receive filtered condensate from
the condensate filtration unit; wherein the air-conditioner unit comprises a controller
10 to switch the condensate filtration unit between a purging state and a dispensing
state.
