【ABSTRACT】

The present disclosure relates to a composition, containing an extract from a bean culture, for prevention of hair loss or promotion of hair growth and a method for preparing the same. The use of an aspect of the present disclosure allows large-scale production of a composition containing a bean culture for prevention of hair loss or promotion of hair growth, and the composition prepared by such a method shows excellent hair loss-preventing and hair growth-promoting effects and has no side effects unlike the existing hair loss treatment agent.
