WHAT IS CLAIMED IS:

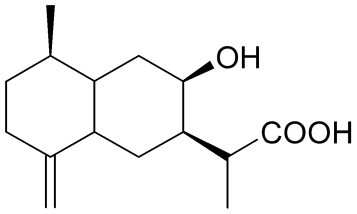

1. Use of a compound of formula (I) for the manufacture of a pharmaceutical composition for promoting wound healing in the skin:

(I).

2. The use of claim 1, wherein the compound is at a concentration of between 8 ng/ml and 18 ng/ml.

3. A compound of formula (I):

(I).

4. A method of preparing a compound of formula (I), comprising the steps of:

(S1) preparing an explant of *Saussurea involucrate*;

(S2) obtaining a callus from the explant of step (S1) and preparing a liquid culture of the callus;

(S3) processing the liquid culture of the callus to obtain a biomass of the callus and preparing a ground biomass therefrom;

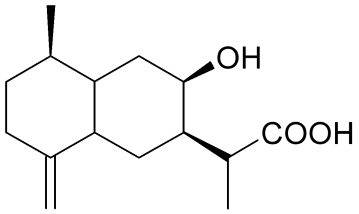

(S4) carrying out a solvent extraction of the ground biomass to obtain at least a supernatant; and

(S5) isolating the compound of formula (I) from the supernatant by column chromatography.

5. The method of claim 4, wherein the explant of *Saussurea involucrate* of step (S1) is prepared by culturing a young leaf of a *Saussurea involucrate* plant.

6. The method of claim 4, wherein the solvent extraction of step (S4) is carried out with 50%-100% ethanol.

7. A Compound of formula (I) for use in inhibiting melanogenesis and promoting collagen production

(I).
