

ASSET TRANSFER REVERSAL METHOD AND APPARATUS, AND ELECTRONIC DEVICE

ABSTRACT

5 A first member of a blockchain obtains a blockchain asset transferred by a second member of the blockchain responsive to an asset transfer request of an off-chain asset, where the blockchain asset is issued by an anchor point at the blockchain and held at an account for the second member. When a first transfer-out operation for transferring the off-chain asset to a payee from an account opened at the first member fails, a second transfer-out operation to
10 the payee is performed from a self-owned account of the first member. The first member writes a transaction reversal application for an asset transfer transaction corresponding to the asset transfer request into the blockchain in a blockchain account book at the blockchain. The first member performs an asset clearing with the second member for the off-chain asset corresponding to the second transfer-out operation.
