

ABSTRACT
FLOATING STRUCTURE FOR PHOTOVOLTAIC SYSTEM

The present disclosure relates to a floating structure for photovoltaic panels. More particularly, the present disclosure relates to floating structures for photovoltaic panels which may be linked together to form a larger floating structure. In a first aspect of the disclosed technology, there is provided a photovoltaic cell assembly, comprising: a photovoltaic module; a rigid frame comprising an upright section and a sloped section, wherein the rigid frame is arranged to support the photovoltaic module; and a modular float connected to the rigid frame.
