

【ABSTRACT】

In one aspect, the present disclosure discloses an emulsion composition and a method for preparing same. The emulsion composition comprises: an inner phase; an external phase; and a plurality of interfacial particles surrounding the surface of the inner phase to form an interface, wherein the interfacial particles have a particle size smaller than the inner phase, and the interfacial particles include organic particles. The method for preparing an emulsion composition comprises: preparing a colloidal solution comprising a dispersion medium and organic particles dispersed in the dispersion medium; preparing an aqueous phase; preparing an oil phase; and mixing the colloidal solution, the aqueous phase, and the oil phase so as to prepare an emulsion composition comprising an inner phase, an external phase, and a plurality of interfacial particles surrounding the surface of the inner phase to form an interface, wherein the interfacial particles have a particle size smaller than the inner phase, and the interfacial particles include organic particles.
