Abstract

Management System and Method for Contract for Difference Trading

A management system and method for contract for difference trading are disclosed. The system includes a user interface module and a processing module. The user interface module includes computer program code for receiving user inputs on a purchase or sale of a contract for difference and computer program code for communicating data to the processing module in dependence on said user inputs. The processing module comprises a machine executing computer program code that is arranged to receive the data communicated from the user interface, wherein if the data concerns a purchase, the computer program code is arranged to debit a financial account for the value of the contract for difference to be purchased, if the data concerns a sale, the computer program code is arranged to credit a financial account for the value of the contract for difference to be sold.
