

ABSTRACT

INDWELLING NEEDLE

An indwelling needle (10) includes a catheter (12), a catheter hub (14), and an inner needle (18). The catheter
5 hub (14) includes a hub body (30) and a wing (40) protruding from a side portion of the hub body (30). The wing (40) includes a soft portion (44) softer than the catheter hub (14) and a hard portion (42) harder than the soft portion (44). The hard portion (42) has a front frame
10 (54) which is located on a distal side of the wing (40), is connected to the hub body (30), and extends in a direction away from the hub body (30). The soft portion (44) covers at least a surface of the front frame (54) opposing a body surface X of a living body.
